

Laporan Bulan ke-3

16 April- 15 Mei 2024

Nama : Ramadhan Ihsani Yulfa

NIM : 250202352

My three-month adventure with Bangkit has truly transformed me. I owe a big thank you to Kak Tania, who's been a huge help with all the administrative stuff and more. And a shoutout to my awesome classmates for making our environment so fun and supportive.

During the Three Month Progress (15 April - 16 May), I dived into becoming a TensorFlow Developer. It was a journey of learning how to use TensorFlow to create cool stuff like CNNs and sequence models. I also got the hang of transfer learning from the pros' pre-trained models and learned how to structure Machine Learning projects, splitting datasets and all.

The grand finale was the TensorFlow: Data and Deployment Specialization. Here, I got hands-on with running and deploying models on browsers using TensorFlow.js and mobile devices with TensorFlow Lite. I also learned some neat tricks for data handling in ML projects and explored fancy deployment scenarios with TensorFlow.

Right now, I'm dealing with insecurity as I have to apply for internships after Bangkit. I feel like my skillset isn't sufficient for companies to accept me. Despite this, I'm actively working to overcome this insecurity by continuing to improve my skills and portfolio.

Looking back, I've grown a lot. I've become more disciplined, keeping track of my progress in a logbook every day. It's helped me stay organized and see how far I've come, giving me a clear view of my journey and where I can improve. This habit of disciplined learning and self-assessment is sure to come in handy down the road.
